

JIFFY-SHARE

The Pivot to Simplicity

Navigating the critical moment from over-engineered interactive games to
a highly focused B2B solution.

OUR STARTUP

JIFFY-SHARE

The fastest, easiest, GDPR-friendly way to share slides, links, and resources
after any talk.

Founders: Arthur Limpens, Omio Horo, Laurent Brusa

The 6-Month Journey at 42 Berlin

The Wall

Realizing that monetizing a hyper-casual couch gaming platform was exceptionally difficult.

The Solution

Stripping away the complexity to solve a single, vital friction point: slide sharing.

The Vision

Building **gyro.games**—interactive party games using smartphone gyroscopes as controllers.

The Pivot

Adapting our core QR tech for the events industry to build interactive keynotes.

Phase 1: **Vision vs. Reality**

The Initial Concept

We started our project with a bold technical vision: to revolutionize local multiplayer gaming. We successfully built interactive party games that players connected to seamlessly via a central screen using a QR code. The technical execution was solid and user engagement was highly promising during initial testing.

The Reality Check

While the technology was incredibly fun and functional, we quickly realized we lacked a viable path to revenue. We had built a robust connection system, but finding an audience willing to pay for casual couch gaming proved to be an insurmountable entrepreneurial hurdle.

The First Critical Moment

03

MONTHS IN

The Monetization Wall

Halfway through our timeline, we had to make a tough call. We had great technology—the seamless, frictionless QR code connection architecture—but we were in the wrong market.

To survive, we needed a B2B application where solving a specific pain point held actual monetary value for the user.

The Second Hurdle: **Presenter's Dilemma**

Cognitive Load

Our first pivot was "Interactive Keynotes." But expecting presenters to manage live speeches while operating audience interactions (games/polls) proved to be too big of an ask.

Dashboard Hassle

We required speakers to log into a complex dashboard to control these interactions. This introduced massive friction, completely killing the chance for easy adoption.

Feature Bloat

By offering everything from live games to data collection, we lost focus on the primary problem. We were vastly over-engineering the live keynote experience.

The Breakthrough

Presenters just want to share their slides without friction. We built a spaceship when they simply needed a bicycle.

— THE REALIZATION

The Process of Simplification

Kill Your Darlings

We had to abandon the complex gaming and polling features we spent months building. Letting go of code to save the product is a difficult but necessary entrepreneurial step.

Listen to the Friction

User feedback clearly showed that dashboards equaled stress. We completely restructured our architecture to remove the need for a live presenter dashboard.

Do One Thing Perfectly

We identified the single biggest pain point at the end of a talk: "How do I get these slides?" We focused 100% of our energy on solving that exact question instantly.

The Final Product: JIFFY-SHARE

For the Presenter

Presenters upload their deck before the event, generate a QR code, and place it on their final slide. During the talk, there is zero dashboard management and zero friction. They simply finish their speech and display the code.

For the Audience

Attendees point their phone at the screen, scan the code, and immediately receive the slide deck, links, and resources directly on their devices. It is 100% GDPR-friendly with no mandatory app downloads required.

Questions?

Thank you for listening to the Jiffy-Share journey.
